DETAILED ACTION

1. The response to the Restriction requirement is acknowledged. The response was filed July 2, 2002. Upon further consideration, the Restriction requirement of Paper No. 6 is set forth below by applying the PCT standard for lack of unity.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6 and 17-20, drawn to compositions comprising fusion receptors comprising scFv that bind PSMA linked to a cytoplasmic domain of a molecule that functions as a transducer of a mammalian immune response in the presence of a costimulatory factor.

Group II, claim(s) 7-11 and 21-24, drawn to polynucleotide expression vectors, host cells and methods of using an expression vector, where the expression vectors encode fusion receptors comprising scFv that bind PSMA linked to a cytoplasmic domain of a molecule that functions as a transducer of a mammalian immune response in the presence of a costimulatory factor.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the technical feature of the inventions of group I is that of a polypeptide product that is a fusion protein comprising a scFv that binds PSMA, where the scFv is linked to a cytoplasmic domain of a molecule that functions as a transducer of a mammalian immune response in the presence of a costimulatory factor; whereas the technical feature of group II is that of a polynucleotide expression vector product that encodes a fusion

protein comprising a scFv that binds PSMA, where the scFv is linked to a cytoplasmic domain of a molecule that functions as a transducer of a mammalian immune response in the presence of a costimulatory factor. Thus, groups I and II have different technical features and lack unity of invention. Furthermore, PCT Rule 13.1 does not provide for the examination of multiple products, but the examination of one product with methods of making and methods of use.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even if the requirement is traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
